Evaluation metrics

TITLE:

Happy
Coding!!!

BY

(B.Tech IT – III year)

Ajitaa Jagannathan – 2015115004

Saravanan Rajendran – 2015115048

Sshreya .K.Y - 2015115115

Evaluation metrics:

- Since this project is a new project, this has no standard to compare and see the relative performance.
- This project's main aim is to reduce the debugging time of the programmer. So the project can only be tested manually.
- The only evaluation metrics is the decrement of the coding time of a beginner or intermediate level developer.
- To see that improvement this project has to be deployed and the results must be collected. Then the results can be compared and contrasted with the users who do not use this plugin for their application development.
- State of mind is also an evaluation metrics. Using this plugin user need not switch window and feel distracted. This could make the user **happy** while **coding**.
